

Site Overview | Jing-Zhang City Commissioning Belt

Provisional rough boundary for design-model use only; not an official redline.

Urban-design core: public spine + three key zones; Civic AI Overlay and C/P/W remain overlays/support.

Key Idea

The Jing-Zhang Public Spine and three key zones form the urban-design core. Civic AI Overlay is the first planning innovation; Compute-Power-Water is professional support; C0-C6 + Evidence Ledger is the operating method.

Design / Delivery

The proposal does not reserve a piece of land for AI. It defines how AI can be spatially expressed, validated, understood by the public, overridden by humans, and exited when necessary.

Conceptual Land-Use Structure

Design-proposal layer, not approved statutory land use; to be reviewed when formal controls are available.

Key Idea

Loop: Research → Test → Limited Deployment → Daily Use → Evidence → Rule Update → Re-test.
Zhongzhiyuan produces test evidence; AI Origin provides daily-life feedback; Dazhongsi converts evidence into renewal rules.

Design / Delivery

Conceptual collaboration: Beiwei Community, Future Science City, Huairou Science City, Beijing E-Town and the Beijing-Tianjin-Hebei region. These are capability flows, not claimed partnerships.

Mobility, Stitching and Blue-Green Public Space

Prioritize continuous walking, cycling, accessibility and ecological space before AI services.

Key Idea

Five interfaces: Heritage Room, Developer Commons, Neighborhood Commons, Stitching Gate and Event Field. Components are small, modular, maintainable and removable.

Design / Delivery

Prioritize continuous walking/cycling, east-west stitching, accessibility, shade and everyday life. AI micro-nodes add navigation, emergency and public-explanation capabilities.

Three Key Areas | Distinct Urban Roles

Zhongzhiyuan validates technology; AI Origin validates daily life; Dazhongsi validates renewal and rules.

Key Idea

Zhongzhiyuan CITY TESTBED: Public Front → Controlled Test Core → Prototype Transition → Limited Real-life Edge.
AI Origin LIVING LOAD: AI/HUMAN/OFFLINE/LOW-SENSING service paths.
Dazhongsi RENEWAL RULE LAB: KEEP/ADAPT/TEMPORARY/TRIGGERED.

Design / Delivery

12 scenario cards, 4 test/validation scenarios and 8 persona groups share one Evidence-Risk-Permission-Human-Rollback foundation.

Core Metrics and Evidence Chain

All spatial metrics come from the provisional design model; they are not baseline statistics or government commitments.

GeoJSON → EPSG:4548 recomputation → metrics.json → proposal references → figures/HTML consistency → self-check

Evidence: site_boundary / green_space / public_space / key_areas / proposal.md; FAR, height and population remain unknown without official controls.

Key Idea

Overlay objects: EDGE / ENERGY / LOGISTICS / PUBLIC-AI / MUNICIPAL-AI / OPS / GOVERNANCE.
Each rule records scope, object, requirement, responsible party, permission, evidence, re-test trigger and exit.

Design / Delivery

C: regional-district-edge compute matching. P: Protected/Flexible/Migratable power coordination. W: cooling mode, water source and peak-water review. No fabricated MW, water demand or pipe sizing.

Site Overview | Jing-Zhang City Commissioning Belt

Provisional rough boundary for design-model use only; not an official redline.

Urban-design core: public spine + three key zones; Civic AI Overlay and C/P/W remain overlays/support.

Key Idea
Three cultural layers: Jing-Zhang engineering heritage + Zhongguancun innovation culture + AI open-source/validation/responsibility culture. Public landmarks: First Run Yard, Open Evidence Hall and Civic Override Beacon.

Design / Delivery
Delivery uses NOW / NEXT / CONDITION-BASED. Annual mechanisms include Commissioning Week, Open Urban AI Plugfest, Civic Audit Open Day and Rulebook Release. All events and attraction mechanisms remain proposals.
