

Site Overview | Jing-Zhang City Commissioning Belt

Provisional rough boundary for design-model use only; not an official redline.

Urban-design core: public spine + three key zones; Civic AI Overlay and C/P/W remain overlays/support.

Notes

The Jing-Zhang Public Spine and three key zones form the urban-design core. Civic AI Overlay is the first planning innovation; Compute-Power-Water is professional support; C0-C6 + Evidence Ledger is the operating method.

site-overview

Good city first; AI becomes a planned additional capability.

Site Overview | Jing-Zhang City Commissioning Belt

Provisional rough boundary for design-model use only; not an official redline.

Urban-design core: public spine + three key zones; Civic AI Overlay and C/P/W remain overlays/support.

Notes

The proposal does not reserve a piece of land for AI. It defines how AI can be spatially expressed, validated, understood by the public, overridden by humans, and exited when necessary.

site-overview

From research density to real-city validation capacity.

Conceptual Land-Use Structure

Design-proposal layer, not approved statutory land use; to be reviewed when formal controls are available.

land-use-structure

Notes

Loop: Research → Test → Limited Deployment → Daily Use → Evidence → Rule Update → Re-test. Zhongzhiyuan produces test evidence; AI Origin provides daily-life feedback; Dazhongsi converts evidence into renewal rules.

Notes

7 conceptual land-use bands; design-proposal layer only.

03 Public Spine and Public Space

Continuity, usability and choice matter more than a “tech look”.

Mobility, Stitching and Blue-Green Public Space

Prioritize continuous walking, cycling, accessibility and ecological space before AI services.

mobility-bluegreen

Notes

Five interfaces: Heritage Room, Developer Commons, Neighborhood Commons, Stitching Gate and Event Field. Components are small, modular, maintainable and removable.

04 Three Key Areas and AI Scenarios

Validate technology, daily life and renewal rules.

Three Key Areas | Distinct Urban Roles

Zhongzhiyuan validates technology; AI Origin validates daily life; Dazhongsi validates renewal and rules.

key-areas

Notes

Zhongzhiyuan CITY TESTBED: Public Front → Controlled Test Core → Prototype Transition → Limited Real-life Edge.
AI Origin LIVING LOAD: AI/HUMAN/OFFLINE/LOW-SENSING service paths.
Dazhongsi RENEWAL RULE LAB: KEEP/ADAPT/TEMPORARY/TRIGGERED.

Three Key Areas | Distinct Urban Roles

Zhongzhiyuan validates technology; AI Origin validates daily life; Dazhongsi validates renewal and rules.

key-areas

Notes

12 scenario cards, 4 test/validation scenarios and 8 persona groups share one Evidence-Risk-Permission-Human-Rollback foundation.

Turn AI-era planning objects into readable, reviewable and reversible rules.

Core Metrics and Evidence Chain

All spatial metrics come from the provisional design model; they are not baseline statistics or government commitments.

GeoJSON → EPSG:4548 recomputation → metrics.json → proposal references → figures/HTML consistency → self-check

Evidence: site_boundary / green_space / public_space / key_areas / proposal.md; FAR, height and population remain unknown without official controls.

metrics-evidence

Notes

Overlay objects: EDGE / ENERGY / LOGISTICS / PUBLIC-AI / MUNICIPAL-AI / OPS / GOVERNANCE. Each rule records scope, object, requirement, responsible party, permission, evidence, re-test trigger and exit.

Core Metrics and Evidence Chain

All spatial metrics come from the provisional design model; they are not baseline statistics or government commitments.

GeoJSON → EPSG:4548 recomputation → metrics.json → proposal references → figures/HTML consistency → self-check

Evidence: site_boundary / green_space / public_space / key_areas / proposal.md; FAR, height and population remain unknown without official controls.

metrics-evidence

Notes

C: regional-district-edge compute matching. P: Protected/Flexible/Migratable power coordination. W: cooling mode, water source and peak-water review. No fabricated MW, water demand or pipe sizing.

Mobility, Stitching and Blue-Green Public Space

Prioritize continuous walking, cycling, accessibility and ecological space before AI services.

Notes

Basic public services do not depend on an AI account or data authorization.

Provisional rough boundary for design-model use only; not an official redline.

[site-overview](#)

Three cultural layers: Jing-Zhang engineering heritage + Zhongguancun innovation culture + AI open-source/validation/responsibility culture. Public landmarks: First Run Yard, Open Evidence Hall and Civic Override Beacon.

Core Metrics and Evidence Chain

All spatial metrics come from the provisional design model; they are not baseline statistics or government commitments.

GeoJSON → EPSG:4548 recomputation → metrics.json → proposal references → figures/HTML consistency → self-check

Evidence: site_boundary / green_space / public_space / key_areas / proposal.md; FAR, height and population remain unknown without official controls.

metrics-evidence

Notes

Delivery uses NOW / NEXT / CONDITION-BASED. Annual mechanisms include Commissioning Week, Open Urban AI Plugfest, Civic Audit Open Day and Rulebook Release. All events and attraction mechanisms remain proposals.
